Hi all!

I just got a KPC3 as a starter tnc and I am trying to figure out what software to run with it. I would much rather stick with pd stuff. I've got copies of PaKet and Lan-Link. What else should I be looking at and what do you packet.people recommend?

TIA & 73s,
Steve

First, I've been told my newsreader is generating a bad reply to line,
so if you email me, please use jwl@cray.com. Sorry for the inconvenience.

I have recently installed JNOS on my Linux 1.0.9 system and find that
the function keys do nothing other than print a capital A for F1,
B for F2, etc. I understand from reading the various and assorted
manuals that the function keys are suppose to do other things. Especially
the F10 key. Is there something fundamental that I am missing, like
a configuration file?

According to the dos with the port, the fkey (?) function hasn't been
implemented so I can't reassign the functions to something else.

Also has anyone had any success with running JNOS under X? Seems
that the keyboard problem is even more complicated by the convoluted way
X gets in the way.

Thanks for any comments.

Jim.
